

# AnganSakti 360 — Hackathon Jury Presentation

Generated from docs/HACKATHON\_JURY\_PRESENTATION.md (plain-text layout)

## AnganSakti 360 — Hackathon Jury Presentation Guide

Women Development & Child Welfare Department · Government of Andhra Pradesh  
Pilot: Tirupati District · Anganwadi Digital Governance Platform

---

### Document purpose

This guide helps you present AnganSakti 360 to hackathon jury members in a clear, page-by-page manner. It starts with the problem the platform solves and the pages that directly address citizen complaints and accountability, then covers service visibility, supervisor workflows, and a recommended live demo script.

Suggested presentation time: 12–18 minutes (problem + demo) + 5 minutes Q&A.

---

## Part 1 — Introduction (What to say in the first 2 minutes)

### 1.1 One-line pitch

AnganSakti 360 is an AI-enabled, evidence-first digital operating system for Andhra Pradesh Anganwadi centers that connects citizens, field workers, supervisors, and district/state administration on one platform—with a dedicated Public Portal where citizens can share service experiences \*or\* report issues that require formal resolution and supervisor accountability.

### 1.2 Who built this for?

Stakeholder Role in the system

-----

Public User (Citizen) Parents, pregnant/lactating women, guardians, community members—one login for all

Anganwadi Worker Daily operations, attendance, service proof, preschool sessions—not grievance handlers for public complaints

Supervisor Primary investigator for public grievances with full evidence packages and AI summaries

District / State Admin Escalations, compliance, analytics, statewide transparency

### 1.3 What makes this different from a generic feedback app?

1. Evidence-first grievances — Citizens upload photos, video, voice, OCR, WhatsApp imports, QR context, and documents \*before\* investigation starts, so supervisors do not depend on incomplete verbal reports.

2. Supervisor-first routing — Public complaints go to Supervisor Review, not to Anganwadi workers, avoiding conflict of interest and incomplete field clarification loops.

3. Two clear citizen paths — Share Experience (service improvement, no ticket) vs Report Issue (tracked grievance with timeline and closure proof).

4. Full transparency — Citizens see AI analysis, officer actions, resolution evidence, and can confirm, reopen, or escalate.

5. Integrated service visibility — Same portal shows meals, preschool, nutrition, and center activity when the account is linked to a center.

## 1.4 Demo access (pilot)

Role How to log in Typical home URL

Public User Login → select Public User → Enter Portal /beneficiary

Supervisor Login → Supervisor /supervisor

Anganwadi Worker Login → Worker /worker/dashboard

**Public User demo credentials (pilot screen): Phone 9876543210 · Password demo1234**

Demo citizen: Sunita Rao · Center: Alipiri (AWC-TPT-01) · Tirupati

---

## Part 2 — The Problem (What to explain before opening the app)

### 2.1 Real-world problems in Anganwadi service delivery

Explain these pain points to the jury—the pages in Part 3 exist because of them:

# Problem Why it matters

P1 Complaints get lost or delayed Parents and community members report meal gaps, safety concerns, or worker conduct issues through informal channels (phone, verbal visits) with no tracking ID or SLA.

P2 No proof at submission time Officers investigate weeks later without photos, timestamps, or location context—leading to “he said / she said” disputes.

P3 Wrong routing Grievances often land on the same Anganwadi worker who may be the subject of the complaint—citizens fear retaliation and supervisors lack independent evidence.

P4 No visibility after submit Citizens do not know if anyone read their complaint, what action was taken, or when it closed. Trust in government services erodes.

P5 Feedback mixed with grievances Praise, suggestions, and life-safety issues are treated the same—creating unnecessary tickets for appreciation and under-prioritizing urgent issues.

P6 Language and access barriers Rural citizens prefer Telugu voice notes, WhatsApp, or handwritten notes—not only English forms in an office.

P7 Supervisors lack decision support Large queues with no AI severity hint, no structured evidence bundle, and no standard escalation path to district.

### 2.2 How AnganSakti 360 answers the problem

Problem Platform answer

P1, P4 Report Issue → grievance ID, notifications, My Requests, full timeline

P2 PublicEvidenceUpload on both citizen paths; evidence stored on complaint record

P3 Supervisor-first workflow; worker dashboard does not own public grievance queue

P5 Share Experience vs Report Issue — separate data models and outcomes

P6 EN/TE/HI, voice, OCR, WhatsApp/QR demo imports, omnichannel-ready architecture

P7 Public Grievance Center with New / In Review / Need Evidence / Resolved + AI summary

### 2.3 Design principle for jury

Same portal can accept evidence for both appreciation and complaints—but only “Report Issue” creates accountability and supervisor investigation.

---

## Part 3 — Problem-Related Pages (Explain these FIRST)

These pages are the core of your hackathon story. Walk the jury through them in this order.

---

### 3.1 Login — / (Index)

What it is: Government-branded entry with role selection.

What to say:

- One application serves all roles; citizens choose Public User.
- Session persists locally for demo; production would use AP state identity / mobile OTP.

Jury takeaway: Single front door for WDCW digital services.

---

### 3.2 Public Control Room (Dashboard) — /beneficiary

What it is: Citizen home after login—personalized by “Who Are You Today?” (parent, pregnant woman, guardian, etc.).

Key widgets for the problem story:

Widget Purpose for jury

-----

My Experiences Counts: Submitted, Appreciated, Included in Improvements —

\*non-grievance\* feedback

My Requests Counts: Submitted, Under Review, Resolved — \*formal grievances only\*

Center Trust Score Aggregates satisfaction from experiences + service data

Quick actions Share Experience and Report Issue side by side

What to say:

- The dashboard makes the two paths obvious before citizens scroll the whole menu.
- Recent request rows link to full detail for transparency.

Demo tip: Select “Parent / Caregiver” in Who Are You Today to show personalized links.

---

### 3.3 Share Experience — /beneficiary/feedback

Question this page answers: \*‘‘How was your experience with the service?’’\*

What it is: Lightweight service experience collection—opinions, appreciation, suggestions, satisfaction. Does not create a grievance or assign a supervisor.

Fields shown to citizen:

## Field Examples

-----

Submitted As Parent, pregnant woman, guardian, community member, etc.  
Category Meals, Preschool Activities, Learning Experience, Nutrition Services,  
Infrastructure Experience, Worker Support, Communication, Suggestions  
Experience Type Appreciation, Suggestion, Concern (non-actionable), Satisfaction,  
General  
Rating 1–5 stars  
Comment Free text  
Optional Evidence Photo, video, voice, OCR, WhatsApp, QR, document — context only

After submit (AI pipeline):

- Sentiment: Positive / Neutral / Concern
- Satisfaction score
- Experience summary and suggested improvements
- Status: Recorded → Acknowledged → Included in Service Improvement (when positive)
- Feeds: Center Trust Score, Public Insights, Service Analytics

Notifications examples:

- “Thank you for sharing your experience.”
- “Your suggestion improved center services.”

Where history lives: /public/my-experiences

What to say to jury:

- A parent can upload a classroom photo with praise without opening a legalistic complaint form.
- Evidence is allowed but does not trigger punishment workflow—it enriches analytics.

Do NOT say: This page escalates to workers or creates CMP tickets.

---

## 3.4 Report Issue — /beneficiary/omnichannel-feedback

Question this page answers: “Did something happen that needs action?”\*

What it is: Official grievance and accountability portal. Creates a tracked resolution process with grievance ID and supervisor queue.

Fields shown to citizen:

## Field Examples

-----

Submitted As Same six public types  
Issue Category Meals Not Delivered, Worker Conduct, Nutrition Missing, Water Issue,  
Toilet Issue, Safety Concern, Infrastructure Problem, Delay in Service, Other Public  
Issues  
Severity Low / Medium / High / Critical  
Resolution Preference Supervisor investigation, urgent same-day, district escalation if  
needed  
Description Required narrative  
Evidence Encouraged — same upload component as Share Experience  
Consent DPDP-style consent for processing  
Anonymous Optional — hides name from field staff; tracking ID retained for supervisors

After submit (AI pipeline):

- Issue classification, severity prediction, urgency, evidence validation hint
- Confidence score and recommended resolution path
- Grievance ID created (CMP-\*)
- Status flow: AI Review → Supervisor Investigation (not worker)

Workflow string for jury:

Public Submission → AI Review → Supervisor Investigation → Resolution → Public Confirmation → Closure

Notifications examples:

- “Your issue is under supervisor review.”
- “Resolution uploaded.” (when supervisor attaches proof)

Where history lives: /public/my-requests and /beneficiary/request/:id

What to say to jury:

- This is the Andhra Pradesh accountability path—every submission is investigatable with proof.
- Anganwadi workers are not assigned as grievance owners for these cases.

---

### 3.5 Shared evidence upload (component, both pages)

Component: PublicEvidenceUpload — one implementation, two workflows after submit.

Method Use case

-----  
Photo / Video Meal not served, infrastructure damage  
Voice Telugu audio note transcribed for AI  
OCR Handwritten register or wall notice  
WhatsApp (demo import) Chat thread as evidence  
QR (demo) Center verification context  
Document PDF / office letter

What to say: We did not duplicate upload logic—citizens learn one pattern; the system branches only after submit.

---

### 3.6 My Experiences — /public/my-experiences

What it is: History of all Share Experience submissions only.

Buckets:

Bucket Meaning

-----  
Submitted All experiences logged  
Appreciated Positive sentiment / appreciation type  
Included in Improvements Fed into service improvement planning

Row opens: /public/experience/:id — original text, evidence, AI summary, improvement message, no grievance timeline.

Jury takeaway: Proves the platform separates voice of citizen from formal complaints.

---

### 3.7 My Requests — /public/my-requests

What it is: History of Report Issue / grievance submissions only (plus linked omnichannel grievances).

Buckets (transparency engine):

Bucket Meaning

-----

Submitted Received by system  
Under Review Supervisor or AI processing  
Action Taken Officer logged action  
Resolved / Closed Resolution or citizen confirmed

Table shows: Reference ID, submitted as, channel, date, status, link to View.

Banner text: Grievances investigated by supervisors using uploaded evidence.

Jury takeaway: This is the citizen's case tracker—like tracking a government service request.

---

### 3.8 Experience detail — /public/experience/:id

What citizen sees:

- Original submission and optional evidence
- AI experience summary (sentiment, satisfaction score, suggested improvements)
- Status: Recorded / Acknowledged / Included in Service Improvement
- Note that data feeds trust score and analytics—no supervisor ticket

Link at bottom: "Need formal action? Report Issue →"

---

### 3.9 Request / grievance detail — /beneficiary/request/:id

What it is: The most important transparency page for accountability.

Sections to show jury:

Section What to point at

-----

Metadata Submitted as, category, severity, center, channel, date  
Original submission Full citizen text  
Uploaded evidence Gallery: photos, voice transcript, documents  
AI explainability Classification, confidence, urgency, reasons  
GPS / evidence validation Demo trust indicators on media  
SLA visibility Target hours, due date, breach hint  
Resolution timeline Submitted → AI Reviewed → Supervisor Reviewing → Action Taken →  
Resolution Uploaded → Citizen Confirmation → Closed  
Supervisor actions Notes, timestamps, resolution attachments

Resolution proof Before/after images, documents  
Citizen actions Satisfied, Reopen, Escalate to district

What to say: This is what “digital government transparency” looks like—citizens are not blind after they complain.

---

### **3.10 Grievances list — /beneficiary/complaints**

What it is: Card list of formal complaints for the logged-in citizen.

- Progress chips per complaint
- Tap → same detail as /beneficiary/request/:id
- Raise new issue → Report Issue page

---

### **3.11 Track Resolution — /beneficiary/status**

What it is: Simplified tracking focused on open grievances and citizen confirmation.

Actions:

- Confirm resolution → closes case, may trigger satisfaction survey
- Reopen → returns to supervisor review (not worker)
- Link to full request detail on each card

Jury takeaway: Closure requires citizen confirmation, not only officer marking “done.”

---

### **3.12 Communication Center — /beneficiary/notifications**

What it is: In-app alerts driving citizens back to detail pages.

Notification When

-----

Thank you for sharing your experience After Share Experience  
Your suggestion improved center services Positive experience included in improvements  
Your issue is under supervisor review After Report Issue  
Resolution uploaded Supervisor attaches proof  
Escalation recorded Citizen escalates to district

Each notification includes returnUrl to the right page.

---

### **3.13 Help & Support — /beneficiary/help**

What it is: Plain-language FAQ distinguishing Share Experience vs Report Issue.

Use this page if jury asks “What should citizens use when?”

---

### **3.14 Supervisor: Public Grievance Center — /supervisor/public-grievance-center**

Show this AFTER citizen flow to complete the accountability story.

What it is: Primary queue for public grievances routed to supervisors.

Queue tab Meaning

-----  
New AI-classified, awaiting supervisor assign  
In Review Supervisor actively investigating  
Need Evidence Supervisor requested more proof from citizen  
Resolved Pending citizen confirmation or closed

Actions on each card: Open Details, Assign, Request Evidence, Escalate, Resolve.

What to say:

- Citizen evidence and AI summary arrive here as a complete package.
- Workers do not appear as owners for these public cases.

Pair with: /supervisor/grievance/:id for deep investigation UI.

---

### **3.15 District: Escalated grievances — /district-admin/escalated-grievances**

What it is: Cases escalated from supervisor or citizen when policy/SLA requires district intervention.

Jury takeaway: Multi-level government escalation is designed in, not an afterthought.

---

### **3.16 State transparency portal (optional) — /public/transparency**

What it is: Public statewide metrics and commitments (can demo without login).

Use if: Jury asks about openness beyond individual case tracking.

---

## **Part 4 — Supporting Pages (Service visibility — after problem story)**

Explain briefly that AnganSakti is not “only complaints”—citizens also see services delivered.

Page Route One-line purpose

-----  
My Services /beneficiary/my-child Child/service summary + evidence table  
Today's Services /beneficiary/daily-journey Attendance, meal, preschool timeline  
Center Services /beneficiary/activities Activity feed from worker logs  
Nutrition /beneficiary/nutrition Nutrition program view  
Center Timeline /beneficiary/center-timeline Public center activity timeline  
Center Health /beneficiary/center-health Center journey / health indicators  
Surveys /beneficiary/surveys Post-closure satisfaction  
Public Profile /beneficiary/profile Language, logout, submission history types  
Center Command /center-command/:id Shared center journey (multi-role)

What to say: Service visibility builds trust; grievance handling protects rights when

services fail.

---

## Part 5 — Worker & Admin (One slide each)

Worker (/worker/\*)

- Attendance with GPS, activity logging, session recording, service proof uploads.
- Complaints page is informational only — directs to supervisor grievance center.

Supervisor (/supervisor/\*)

- Center monitoring, classroom intelligence, coaching, Public Grievance Center.

District / State

- Analytics, compliance, escalated grievances, executive KPIs.

---

## Part 6 — Recommended live demo script (8–10 minutes)

Step Role Action What jury should notice

-----

- 1 Public User Login → Dashboard Two widgets: Experiences vs Requests
- 2 Public User Share Experience → rate 5 stars → optional photo → submit Thank-you message; appears in My Experiences
- 3 Public User Report Issue → Meals Not Delivered → attach photo → AI preview → submit Grievance ID; notification
- 4 Public User My Requests → View detail Timeline, evidence, AI block
- 5 Supervisor Login → Public Grievance Center New queue shows citizen case
- 6 Supervisor Assign → add action → upload resolution note —
- 7 Public User Refresh request detail Supervisor action + resolution visible
- 8 Public User Satisfied or Track Resolution confirm Case closure loop complete

---

## Part 7 — Technical highlights (if jury asks “How?”)

Layer Implementation

-----

Frontend React, TypeScript, Vite, Tailwind, government UI shell  
State AppContext + IndexedDB persistence (feedback, complaints, experiences, notifications)  
AI (demo) Client-side grievance engine + experience sentiment analysis  
Data models CitizenExperienceRecord vs ComplaintRecord.grievance bundle  
Routing /beneficiary/\* (legacy path), /public/my-experiences, /public/my-requests  
i18n English, Telugu, Hindi

Production path (verbal): AP state auth, cloud STT/vision, SMS/WhatsApp gateways, supervisor mobile app sync.

---

## Part 8 — Closing statement for jury

AnganSakti 360 turns Anganwadi citizen feedback from informal complaints into evidence-backed, supervisor-accountable, transparent public service—with a separate

channel for everyday experience so government can both listen and act.

---

## Appendix A — Quick route reference (Public User)

Route Page name

-----

/ Login

/beneficiary Public Control Room

/beneficiary/feedback Share Experience

/beneficiary/omnichannel-feedback Report Issue

/public/my-experiences My Experiences

/public/my-experiences My Experiences list

/public/experience/:id Experience detail

/public/my-requests My Requests

/beneficiary/request/:id Grievance / request detail

/beneficiary/complaints Grievances list

/beneficiary/status Track Resolution

/beneficiary/notifications Communication Center

---

## Appendix B — Glossary for jury

Term Meaning

-----

Public User UI label for citizen login (code role: beneficiary)

Share Experience Non-grievance feedback for analytics and trust

Report Issue Formal grievance with supervisor workflow

WDCW Women Development & Child Welfare Department, AP

AWC Anganwadi Center

DPDP Digital personal data protection consent on grievance form
